This total ride control solution is engineered and tested to deliver the ultimate smooth ride in a Sprinter.

Sprint-Aire Premium Ride Quality Rear Suspension

The Sprint-Aire suspension system is engineered for premium ride quality. This load leveling hybrid rear suspension system delivers the best of both worlds. Either with a heavy load or completely unloaded Sprint-Aire is a superior ride quality experience. Every component has been carefully calibrated to work together and deliver the ultimate in passenger comfort. We recalibrate the overly stiff Mercedes leaf spring package to drastically reduce harshness and jarring.

In addition, we add a sleeve style air spring to soften and quiet the ride and provide automatic load leveling. Ideal for limousines, passenger and personal use vans and the ultimate solution for the very stiff riding 4 x 4 chassis. Our shock absorbers are custom built and tuned specifically for our system by Bilstein US. On heavier vehicles we reduce bothersome side to side motion with an upgraded anti-sway bar.
